PROFESSIONAL SUMMARY

Full stack developer with **1+ years** of experience building **B2B, SaaS, and ecommerce** systems in production. Reduced search API latency from **4.2 seconds to 620ms**, cut frontend payload by **84%**, and brought inventory API response times from **9 seconds to 300ms** - across real projects, real traffic, real deadlines. Works across Node.js, Django REST Framework, Next.js, PostgreSQL, MongoDB, and Redis.

WORK EXPERIENCE

Full Stack Developer – **Param Divya IT Solution** | Gandhinagar, Gujarat | Jul 2025 - Present

paramdivya.com – B2B Premium Timber Import & Custom Woodwork Platform | Sep 2025 – Present

Tech Stack: React.js, TypeScript, TanStack Query, DRF, PostgreSQL, Redis, Cloudinary

- Reduced product search API latency from **4.2s to 400–620ms** by introducing Redis caching, PostgreSQL GIN index, query prefetching, and eliminating **N+1** ORM queries.
- Optimized frontend delivery using route-level code splitting, lazy loading, and WebP media optimization, reducing total network payload from **60.8MB to 9.7MB** (84% reduction).
- Implemented dual-layer caching with Redis and TanStack Query, reducing repeat requests to **1ms–20ms** with tag-based invalidation ensuring catalog stays fresh on every admin product update.
- Optimized global and product search using PostgreSQL vector search, GIN index, and trigram fuzzy matching for partial and misspelled query support.
- Implemented react-snap SSG with dynamic sitemap ensuring 100% indexability across product and blog pages.

housingwaala.com – Real Estate Platform | Jul 2025 – Present

Tech Stack: React.js, TypeScript, TanStack Query, DRF, PostgreSQL, Redis, Cloudinary

- Reduced listing API response from **8.5s to 500–700ms** by returning only card-essential fields and deferring full property data to the detail page.
- Optimized multi-table property detail queries from **9s–12s to 800ms–1.5s** using prefetch_related, select_related, PostgreSQL index across images, amenities, pricing, location, and specification relationships.
- Implemented dual-layer caching with Redis and TanStack Query, reducing repeat requests to under **20ms** with event-driven invalidation across listing, detail, and search endpoints.
- Optimized property search using PostgreSQL vector search, Q objects, and GIN index across multi-table relational data.
- Built a global configurable pagination system with dynamic page size override and next/previous links in the response, eliminating frontend pagination business logic.

PROJECTS

[InventoryOps](#) – Multi-Tenant SaaS POS & Inventory Management Platform | Feb 2026 – Present

Tech Stack: React.js, Next.js, Node.js, MongoDB, Redis, NextAuth, RBAC, REST APIs, TypeScript

- Reduced backend response times from **7s–9s to 300–800ms** through Redis caching, MongoDB aggregation pipelines, query optimization, and intelligent cache invalidation.
- Engineered Redis-backed request coalescing to prevent cache stampedes and eliminate duplicate database queries during concurrent cache misses.
- Architected a dual-layer Redis + in-memory caching system with graceful degradation fallback, maintaining API responsiveness during cache outages.
- Built centralized event-driven cache invalidation across inventory, orders, products, and dashboard analytics.
- Implemented RBAC enforcement across 40+ protected API routes and multi-role administrative workflows.
- Designed transactional inventory update mechanisms to maintain stock consistency and prevent overselling across billing, purchase, and order operations.

[GreenmendBio](#) – Export Business Website | Nov 2025 – Present

Tech Stack: Next.js, React.js Tailwind CSS, Vercel

- Designed and developed the complete website for a Made-in-India manufacturer and global exporter of FDA-approved, ISO-certified sugarcane bagasse tableware serving food service businesses across 5+ countries.
- Achieved Lighthouse scores of **98 performance, 92 SEO, and 0 CLS with 0.5s FCP and 0.9s LCP** through Next.js SSG, WebP optimization, and code splitting.

Ecotte – E-Commerce API | Mar 2025 – Jul 2025

Tech Stack: Node.js, Express.js, MongoDB, Cloudinary, Stripe, Razorpay

GitHub: github.com/jdmkd/ecommerce-backend

- Designed **75+** ecommerce REST APIs across 15 modules covering JWT authentication, cart and order workflows, Cloudinary media handling, and Stripe/Razorpay dual payment integration.

StarletteCars – Vehicle Rental Platform | Nov 2023 – Jul 2025

Tech Stack: Django, PostgreSQL, Tailwind CSS, Chart.js, PythonAnywhere

GitHub: github.com/jdmkd/starlettecars

- Engineered date-range conflict prevention enforced on both frontend and backend, allowing multiple independent bookings on the same vehicle across non-overlapping periods with real-time booked period visibility on each listing.
- Built distinct workflows for customers, vehicle owners, and admins – covering bookings, listing management, approval flows, and an analytics-rich vendor dashboard for fleet and revenue oversight.
- Delivered GST-compliant auto-generated PDF invoices, booking history, profile management, search, and pagination across the full rental flow.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, Java

Frontend: React.js, Next.js, Redux, Tailwind CSS, TanStack Query, ReactSnap

Backend: Node.js, Express.js, Django, DRF, REST APIs, JWT Authentication, NextAuth, RBAC, Webhooks

Databases & Caching: PostgreSQL, MongoDB, MySQL, Redis

Performance & Scalability: Query Optimization, Cache Invalidation, Request Coalescing, Modular Service Architecture, Feature-Sliced Design

DevOps & Tools: Git, GitHub Actions, Linux, Vercel, Render, Cloudinary, Cloudflare R2, AWS S3

EDUCATION

Master of Computer Applications (MCA), LJ University, Ahmedabad | 2023 – 2025

Bachelor of Computer Applications (BCA), Gujarat University, Ahmedabad | 2020 – 2023
