PROFESSIONAL SUMMARY

Full Stack Developer with hands-on production experience building B2B, real estate, and SaaS applications. Delivered measurable improvements across search performance, API responsiveness, and frontend optimization, including reducing API response times from **5-6s** to **200-620ms** and cutting frontend payload by **84%**. Experienced in multi-tenant SaaS architecture, RBAC, caching systems, and business-critical transaction workflows.

WORK EXPERIENCE

Param Divya | Full Stack Developer | Gandhinagar, Gujarat [Jul 2025 – Present]

[paramdivya.com](#) – B2B Premium Timber Import & Custom Woodwork Platform [Sep 2025 – Present]

- Built product catalog, category filtering, product detail pages, quote request workflows, and blog functionality using React.js, Django REST Framework, and PostgreSQL.
- Engineered a custom Web Application Firewall (WAF) middleware with IP reputation scoring, geo-fencing, rate limiting, and honeypot detection, reducing security middleware overhead through in-process caching.
- Built a direct-to-cloud image pipeline with client-side WebP compression, signed Cloudinary uploads, and automated cleanup, eliminating server load during uploads and preventing orphaned storage accumulation.
- Reduced product search and catalog API response times from **5-6s** to **200-620ms** through PostgreSQL query optimization, GIN indexing, trigram fuzzy matching, and **N+1** query elimination.
- Implemented Redis and TanStack Query caching with event-driven invalidation, serving repeat requests in **1-5ms** while minimizing database load and network requests.
- Built a Node.js + Sharp image optimization pipeline that automatically converts, compresses, and rewrites static asset imports to WebP, reducing frontend payload from **60.8MB** to **9.7MB** (84% reduction).

[housingwaala.com](#) – Real Estate Platform [Jul 2025 – Present]

- Built property listings, search, detail pages, filtering, and map-based property discovery.
- Optimized multi-table property detail queries from **9-12s** to **0.7-1.5s** for property images, amenities, pricing, location, and specifications.
- Designed a dual-layer caching system (Redis + TanStack Query) with event-driven invalidation, bringing repeat requests to under **20ms** across listing, detail, and search endpoints.

PROJECTS

[InventoryOps](#) – Multi-Tenant SaaS POS & Inventory Management Platform [Feb 2026 – Present]

- Built a multi-tenant SaaS POS platform on a shared-database architecture with complete tenant data isolation, supporting product catalog, procurement, customer management, billing operations, and financial analytics.
- Implemented RBAC across **40+** protected API routes with **5** permission tiers, restricting staff to POS operations while providing admins access to inventory, reporting, and billing.
- Engineered an ACID-compliant checkout pipeline using MongoDB transactions to process split payments, update inventory atomically, and prevent overselling.
- Reduced backend response times from **7-9s** to **300-800ms** through MongoDB aggregation pipelines, query optimization, and intelligent cache invalidation, with repeat requests served in **10-30ms** from Redis cache.
- Built a resilient dual-layer caching system (Redis + in-memory LRU fallback) with request coalescing, preventing cache stampedes and maintaining responsiveness during Redis outages.
- Developed enterprise reporting including PDF invoices, Excel/CSV exports, and a custom TallyPrime XML pipeline for direct accounting synchronization with zero manual data entry.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Node.js, Python

Frontend & State Management: React.js, Next.js, Redux, Tailwind CSS, TanStack Query

Backend: Node.js, Express.js, Django, DRF, JWT Authentication, NextAuth, RBAC

Databases & Caching: PostgreSQL, MongoDB, Redis

DevOps & Tools: Git, GitHub Actions, Vercel, Render, Cloudinary, Cloudflare R2, AWS S3

EDUCATION

MCA – LJ University (2023–2025) | BCA – Gujarat University (2020–2023)
